## **DETAILED ACTION**

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive (due to the filing of DECLARATION PURSUAN~ TO 37 C,F.R, § 1.13) and, therefore, the finality of that action is withdrawn.

Claims 75, 81-85, 89 and 90 are currently pending in the application.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 75, 81-85 and 90 are rejected under 35 U.S.C. 103(a) as being unpatentable over Castle et al. (U.S Patent No 5,848,830) in view of Pathirana (U.S Patent No. 6,879,961).

In reference to claim 75, Castle discloses a system for advertising in Fig. 6 comprising: a floor display (floor display 34 of mat 10; Figs. 1 and 6) that conveys visual marketing information for a product (col. 3, lines 61-64);

an output device (audio emitter speaker 63; col. 4, lines 30-31) for generating sound, wherein the output device conveys audio marketing information for the product (col. 4, lines 40-41);

a touch-activated sensor (70 of Fig. 6) such that the sensor can be selectively actuated by a consumer based on the consumer's interest in the product (col. 4, lines 43-46);

a memory comprising instructions for generating sound from the output device (chip containing desired audio sounds; col. 4, lines 35-37); and a controller (within the chip, i.e. the

Application/Control Number: 09/965,963

Art Unit: 2629

۷.

chip inherently having a controller to emit a jiggle or other appropriated sound associated with visual advertisement and actuates the speaker or the lamp or both when someone walk on the mat 10; col. 4, lines 40-47) in electrical connection with the output device (63), the sensor (70), and the memory, the controller executing the memory instructions in response to a signal generated by the sensor (the touch sensitive pad 70 actuates the speaker or the lamp or both when activated by user; col. 4, lines 43-47).

Accordingly, Castle discloses everything except the floor display conveys visual marketing information for a product that is proximal to the display.

Pathirana discloses a display panel 14 (Fig. 1) for displaying marketing information for a product (col. 1, lines 40-45) proximal to the display and consumers can use the touch activate screen for market information of the interested product.

It would have been obvious for one of ordinary skill in the art at the time of the invention to learn the teaching of Pathirana, i.e. display customer's interested product information on the proximal display, in the system of Castle so that shoppers can easily use the display panel to obtain further information concerning certain merchandise and services (col. 1, lines 65-67; col. 2, lines 39-44).

In reference to claim 81, Castle discloses the output device at least one speaker (62; col. 4, lines 30-31).

In reference to claim 82, Castle discloses a direct current power source that powers the controller (battery; col. 4, lines 10-11).

In reference to claim 83, Castle discloses wherein the floor display is illuminated (col. 3, lines 61-62).

Application/Control Number: 09/965,963

Art Unit: 2629

In reference to claim 84, Castle discloses the controller is in further electrical connection with the floor display, and wherein the memory further comprises instructions for illuminating the floor display in a patter (modification may be added to the lamp 56 such as a timed switch to cause the lamp 56 to blink at a desired interval, i.e. a pattern).

In reference to claim 85, Castle discloses the controller executes the instructions for illuminating the floor display in response to a signal from sensor (the touch activated sensor 70 actuates the both of the lamp and the speaker when someone walks on the mat; col. 4, lines 13-15 and 43-46).

In reference to claim 89, Castle discloses the sensor 70 is proximal to the display 34 (see Figs. 1 and 6)

In reference to claim 90, Castle discloses the floor display is rectangular (see Fig. 6).

## Response to Arguments

4. Applicant's arguments with respect to claims 75, 81-85 and 89-90 have been considered but are most in view of the new ground(s) of rejection.

## Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See Form PTO 892 for the patent of Advertising display systems having displays illuminated and sounds modifiable using touch sensor that conveys information of the products proximal to the display based on the customer's desires.
